

*"The cast-in-place concrete is massed and manipulated to assert its essential, ancient, permanent properties. The arch... reduces the material to a decorative motif, both mannerist and referential."*

*Elizabeth Danze, AIA, Texas Architect 1/2 2004*

St. Edward's University - Trustee Hall

**C**ast-in-place concrete is exposed selectively as architectural finish throughout the building, complementing the soft, ochre colored brick of the St. Edward's campus. A south facing architectural concrete feature wall, with cantilevered concrete stairs and a molded, arched entryway, provides the buildings central focus and organization, while protecting its inhabitants from the brutal Texas sun.
